

As modern businesses strive to improve delivery, manage distributed teams, and

scale projects quickly, choosing the right **project management tool** is more important than ever. If you're part of the **Orangescrum** ecosystem or exploring your options, you may be wondering:

*"Should I go with Orangescrum Work or Orangescrum Agile?"*

While both are powerful tools under the Orangescrum umbrella, they're built for different purposes, team types, and project methodologies. In this blog, we'll take a deep dive into both products, compare their key features, and help you decide which one best suits your team's needs.

## What is Orangescrum Work?

Orangescrum Work is a modern, clean, and simplified project management solution for businesses that need to organize, track, and manage day-to-day projects without diving deep into agile frameworks.

### It provides:

- Project dashboards
- Task management with due dates and priorities
- Built-in timesheets
- Team workload visibility
- Client collaboration

It's perfect for teams looking for a plug-and-play solution to manage client work, internal tasks, and service-based projects without too much configuration.

## What is Orangescrum Agile?

Orangescrum Agile, on the other hand, is tailor-made for teams that follow [Agile methodologies](#) like Scrum or [Kanban](#).

### It supports:

- Backlog and sprint planning
- User stories and story points
- Kanban and Scrum boards
- Burndown charts and velocity reports

- Agile metrics and custom workflows

It's built for software teams, product teams, and agile organizations who need more structure, measurement, and flexibility in how they deliver work.

## Feature Comparison

Feature	Orangescrum Work	Orangescrum Agile
<b>User Interface</b>	Clean, minimal, easy for non-technical teams	Designed for Agile teams with technical depth
<b>Task Management</b>	Simple task creation, assignment, and progress tracking	Task creation with story points, priorities, and sprint linking
<b>Project Types</b>	General projects, client work, internal tasks	Agile projects, product development, sprint planning
<b>Boards</b>	Kanban, List, Calendar views	Scrum and Kanban boards with Sprint views
<b>Time Tracking</b>	Built-in timesheets, effort logging	Time logs per sprint/task with reporting
<b>Sprint Planning</b>	Not available	Fully supported (create, track, close sprints)
<b>Backlog Management</b>	Not included	Core feature for planning sprints and priorities
<b>Reporting</b>	Task reports, effort logs	Agile-specific reports (Burndown, Velocity, etc.)
<b>Best For</b>	Freelancers, agencies, SMEs, consultants	Agile teams, dev teams, product managers, SCRUM masters

## Which One Fits Your Team?

### Choose **Orangescrum Work** if:

- You're managing client projects or service delivery
- You want an easy setup and quick team adoption
- Your projects don't follow Agile workflows
- You need built-in time tracking, dashboards, and status updates

**Example:** A digital marketing agency tracking campaigns, client deliverables, and internal operations.

### Choose **Orangescrum Agile** if:

- You follow the Scrum or Kanban methodology
- Your projects are iterative and based on sprints
- Your team is technical (software/product teams)
- You need to manage product roadmaps, epics, and user stories
- You rely on velocity, sprint planning, and Agile metrics for decision-making

**Example:** A software development company working in 2-week sprints, managing feature releases, and measuring team performance through story points.

## Key Benefits of Each Platform

### *Benefits of Orangescrum Work*

- Plug-and-play setup for instant productivity
- Built-in client and team management
- Quick task and project planning
- Effortless time tracking
- Clean UI for faster onboarding

### *Benefits of Orangescrum Agile*

- Agile-ready workflows for product and dev teams
- Sprints, story points, and backlog control
- Advanced Agile reporting and metrics
- Great for cross-functional product squads
- Ideal for scaling Agile processes organization-wide

# IT Sector Spotlight: How Orangescrum Works

## Benefits IT Teams

While Orangescrum Agile is often associated with software development, Orangescrum Work offers huge advantages for IT services and internal IT departments as well.

*Here's how the IT sector thrives with Orangescrum Work:*

### 1. Better Incident & Task Management

Internal IT teams often handle a mix of projects, service tickets, upgrades, and support tasks. Orangescrum Work lets them track all these in one place, assign ownership, and monitor progress through intuitive dashboards.

### 2. Efficient Resource Allocation

With built-in resource availability and timesheets, IT managers can see who is overbooked or available, improving task distribution and reducing bottlenecks.

### 3. Cross-Team Collaboration

IT projects often involve multiple departments (security, dev, QA, ops). Orangescrum Work fosters cross-functional collaboration with task-level communication, file sharing, and real-time updates.

### 4. Client & Vendor Management

If you're a managed service provider (MSP), you can use Orangescrum Work to manage multiple client accounts, track deliverables, and keep communication streamlined.

## 5. IT Asset and Change Tracking

Although not a dedicated ITSM tool, Orangescrum Work can be customized to track IT changes, rollouts, and upgrades, especially when paired with roadmap planning.

## 6. Easy Onboarding for Non-Agile Teams

Many internal IT teams aren't trained in Agile but still need structure. Orangescrum Work provides that structure without requiring Agile certification or process change.

## Which One Is Right for You?

*Still unsure? Here's a simple breakdown:*

Which One Is Right for You?		
Team Type	Orangescrum <u>Work</u>	Orangescrum Agile
Client-facing agency	✓ Recommended	✗ Not ideal
Product/Software team	✗ Limited for Agile	✓ Recommended
Small business/startup	✓ Recommended	✗ May be too advanced
Agile transformation team	✗ Not suitable	✓ Recommended
HR/Operations/Internal teams	✓ Recommended	✗ Not required

You can also start with Orangescrum Work and upgrade to Orangescrum Agile when your team adopts [Agile methodology](#) or needs sprint-level tracking.

# Conclusion

Both Orangescrum [Work](#) and [Orangescrum Agile](#) are built to help teams collaborate

better, deliver faster, and stay organized, just in different ways.

If you're looking for simplicity and speed, go with Orangescrum Work.

If you're running agile teams and need structure around sprints, backlogs, and metrics, [Orangescrum](#) Agile is the clear choice.

Whatever you choose, you'll benefit from Orangescrum's commitment to flexible, scalable, and user-friendly [project management](#).
